

- 8 Which statement describes how the molecular structure of starch is suited to its function?
- A Amylose has a branched structure and amylopectin is coiled to give a compact molecule for transport.
  - B In the breakdown of amylose and amylopectin, many condensation reactions release stored energy.
  - C In the formation of amylose and amylopectin, many hydrolysis reactions allow the release of stored energy.
  - D The amylose-amylopectin complex is insoluble and does not affect the water potential of the cell.
