

Question	Marking Guidance	Mark	Comments
03.1	Any two from: - Galactose is a monosaccharide/monomer; (Polysaccharide is a) <u>carbohydrate</u> polymer; (Several) monosaccharides/monomers/galactose joined by <u>condensation</u> reactions OR (Several) monosaccharides/monomers/galactose joined by <u>glycosidic</u> bonds;	2 max (2 x AO2)	

Question	Marking Guidance	Mark	Comments
03.2	- Lactose contains (alpha) glucose and GOS does not OR Lactose contains (alpha)glucose + galactose and GOS contains only galactose; - Lactose is a disaccharide and GOS is a polysaccharide; - Lactose has one glycosidic bond and GOS has many glycosidic bonds;	2 max (2 x AO2)	3. Accept 'more than one' for many

Question	Marking Guidance	Mark	Comments
03.3	- Active site (only) <u>complementary</u> to starch OR Active site not <u>complementary</u> to GOS; (Due to) tertiary structure;	2 (2 x AO1)	1. Ignore 'hydrolysis'

Question	Marking Guidance	Mark	Comments
03.4	- Provides galactose/sugar/monosaccharide; (Bacteria use the galactose/sugar) for respiration; (Bacteria use the galactose/sugar) for binary fission;	3 (3 x AO3)	Reject 'glucose' for galactose/sugar once only 3. Accept (cell) division /replication/reproduction for binary fission 3. Reject mitosis;
