

1(a)(i)	<u>hypothalamus</u> ;	1
1(a)(ii)	(changes in) water <u>potential</u> (of blood) ; A ψ	1
1(a)(iii)	<u>posterior</u> pituitary (gland) ;	1
1(b)(i)	61.5(%) ;; 61.538461 <i>allow one mark for not rounding to one decimal place</i>	2
1(b)(ii)	any three from: 1 (increase in ADH results in) aquaporins added to, cell surface membrane / luminal membrane / plasma membrane ; 2 more water leaves, filtrate / collecting duct or more water reabsorbed / more water enters blood or tissue fluid ; 3 so urine, volume decreases / concentration increases ; 4 AVP ; e.g. ADH binds to receptor / increase in permeability of (cell surface) membrane / <i>ref. to</i> water moving, down a water potential gradient or by osmosis 1 descriptions	3
