

7(a)	<i>any three from:</i> 1 <u>rate of amylase production</u> higher with gibberellin (compared to without) ; 2 with and without gibberellin figures ; <i>with gibberellin</i> 3 rate of amylase production increases, over time / for 13 hours OR amylase production gets faster, over time / till 13 hours OR rate increases more after 5 hours / rate is at maximum 13–15 hours / rate plateaus from 13–15 hours ; <i>without gibberellin</i> 4 rate of amylase production, is constant / does not change much / fluctuates in a narrow range / is low throughout ;	3
7(b)	<i>any three from:</i> 1 amylase enters endosperm ; 2 hydrolyses / breaks down / converts, starch / amylose / amylopectin ; 3 maltose / glucose, moves to / used by / needed by, embryo ; 4 (maltose / glucose) for respiration / to release energy / for ATP production ; 5 for growth of <u>embryo</u> ;	3
7(c)(i)	Le ;	1
7(c)(ii)	1 (dominant allele) codes for enzyme ; 2 converts inactive (gibberellin) to active gibberellin ;	2
7(c)(iii)	<i>any two from:</i> 1 cell division / mitosis ; 2 cell, elongation / enlargement ; 3 increase in internode length ;	2
