

|      |                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1(a) | <p><i>any two from</i><br/> protein coat / capsid ; <b>A</b> capsomeres<br/> nucleic acid core / DNA or RNA ;<br/> acellular / AW ;</p>                                                                                                                                                                                                                                                                                       | <b>2</b> |
| 1(b) | <p><i>any three from</i><br/><br/> <i>no, because</i><br/> resolution of light microscope, too low / not high enough ;<br/> only able to distinguish points 200nm or more apart<br/> <i>or</i><br/> size of virus / 30 nm, too small for resolution of (light microscope) of 200 nm ; <b>A</b> range 100-300 nm<br/> wavelength of light too long ;<br/> <i>idea that</i> virus too small to interfere with light waves ;</p> | <b>3</b> |
| 1(c) | <p><i>any three from</i><br/> virus binds to receptors (on host cell surface membrane) ;<br/> <i>ref. to</i> specificity / complementary shapes / complementary binding ;<br/> endocytosis ;<br/> description ; e.g. membrane infolds / pinches in<br/> vesicle formed ; <b>A</b> vacuole</p>                                                                                                                                 | <b>3</b> |
