

- 18 Strips of plant tissue were immersed in a range of sucrose solutions of different concentrations. Their lengths were measured before immersion and after 30 minutes.

The graph shows the ratio of initial length to final length.

What is a correct description of the change in the cells and in the water potential of the cells, as the sucrose concentration increases?

	change in the cells	change in the water potential in the cells
A	less turgid	more negative
B	less turgid	less negative
C	more turgid	less negative
D	more turgid	more negative
