

5 Peat bogs are waterlogged areas with low pH.

- (a) Pollen grains in peat bogs can be used to determine the types of plants that grew in a particular area in the past.

The diagram shows the types of pollen (shaded areas) found in a site in New Mexico.

Cereal crops and beans are sources of food for humans and their animals.

Explain why the abundance of these types of pollen changes, as shown in this diagram.

(3)

This image shows a full page of white paper with ten horizontal dashed lines, typical of primary school handwriting practice paper. The lines are evenly spaced and extend across the entire width of the page. There is no text or other markings on the paper.

- (b) In 1950, the preserved body of a man was found in a peat bog in Denmark. The man died over 2 000 years ago.

The graph shows the maximum and minimum mean temperature and the mean rainfall in Denmark.

- (i) Which is the difference between the maximum and minimum temperatures in May?

(1)

- ☐ A 5°C
- ☐ B 8°C
- ☐ C 10°C
- ☐ D 16°C

(ii) Explain how the conditions in the peat bog preserved the body of this man.

Use the information in the question and your own knowledge to support your answer.
