

1 (a) Fig. 1.1 is a diagram of a nephron.

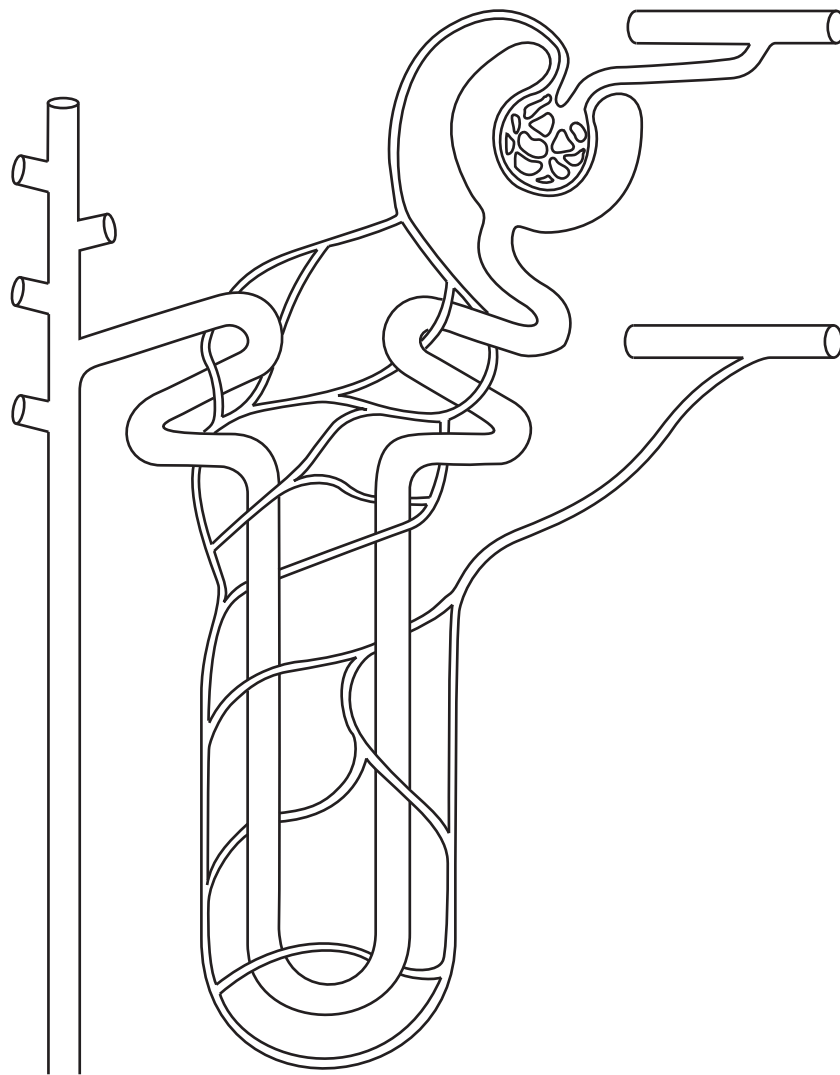

Fig. 1.1

Label Fig. 1.1 using:

- one labelling line and the letter **A** to identify a region that contains urine
- one labelling line and the letter **B** to identify a region that contains podocytes
- one labelling line and the letter **C** to identify a region of the nephron that is within the medulla of the kidney
- one labelling line and the letter **D** to identify the afferent arteriole.

[4]

(b) The cells of the proximal convoluted tubule are adapted to carry out selective reabsorption.

Describe **and** explain how these cells are adapted to carry out selective reabsorption.
