

[illegible]

01.4	1. Phospholipids drawn with head and two tails; 2. Correctly positioned as a bilayer on either side of SGLT1;	2	2. Some of every 'head' must extend into the hydrophilic region and some of every 'tail' must extend into the hydrophobic region. 2. Reject phospholipids drawn within the protein.
01.5	1. One amine/NH₂ group joins to a carboxyl/COOH group to form a <u>peptide</u> bond; 2. (So in chain) there is a free amine/NH₂ group at one end and a free carboxyl/COOH group at the other OR Each amino acid is orientated in the same direction in the chain;	2	Accept on diagram, for example (at least) two amino acids joining by a correctly drawn peptide bond (MP1) with NH₂ at one end and COOH at the other (MP2). 1. Ignore incorrect names of NH₂ and COOH groups. 2. Allow ECF for incorrect naming of groups.
