

- 11 Proteins which transport sugars out of cells have been identified. These proteins are called SWEETs. Each SWEET has seven coiled, cylindrical regions which together make up a pore through the cell surface membrane bilayer, as shown in the diagram.

What describes each of the seven coiled regions (1-7) of a SWEET shown in the diagram?

- A primary structure held in its shape by bonds such as hydrogen bonds
- B primary structure held in its shape by peptide bonds
- C secondary structure held in its shape by bonds such as hydrogen bonds
- D secondary structure held in its shape by peptide bonds
