

- 18** A student carried out an investigation to find the effect of surface area to volume ratio on the rate of diffusion of acid into an agar block.

The student cut different-sized agar blocks containing a pH indicator and placed each agar block into different test-tubes. They recorded the time taken for each agar block to change colour completely.

Which row is correct for this investigation?

	dependent variable	variable that should be standardised during the investigation
A	the size of the agar block	concentration of indicator in the agar block
B	time taken for the block to change colour completely	height of test-tube
C	the size of the agar block	time the block is in the acid
D	time taken for the block to change colour completely	temperature
