

7(a)	any four from: 1 mitochondria produce ATP ; <i>presynaptic knob</i> 2 for production of, acetylcholine / ACh ; 3 for, making / moving, vesicles ; A exocytosis <i>sarcomere</i> 4 active transport of Ca^{2+} into, sarcoplasmic reticulum ; 5 detachment of myosin heads / break cross bridge or allows myosin head to move back to original position ; 6 AVP ; e.g. <i>ref. to</i> sodium potassium pump / active transport of Ca^{2+} out of synaptic knob	4
7(b)	X – agree, because Na^+ influx leads to depolarisation ; Y – disagree, because Cl^- influx leads to hyperpolarisation / description or disagree, because no Na^+ influx so no depolarisation ; X and Y – agree, because Na^+ (influx) is balanced by Cl^- (influx) / AW ;	3
7(c)	any two from: 1 decrease in transmission speed ; 2 <i>ref. to</i> shorter local circuits ; 3 no / less, saltatory conduction / described ;	2
