

1(a)(i)	any two from: 1 absorb / harvest / capture / trap, light / photons ; 2 (to) excite electrons ; 3 (for, cyclic / non-cyclic) photophosphorylation / electron transport chain ; 4 accessory pigment passes energy to, primary pigment / reaction centre ; 5 (pigments) form a, light harvesting cluster / photosystem / PSI / PSII ;	2
1(a)(ii)	thylakoid membrane(s) / granum / grana / lamella(e) ;	1
1(a)(iii)	chromatography ;	1
1(b)(i)	1 (from 0.25) to 1.00 (mol dm^{-3}), concentration / CO_2, is <u>limiting</u> factor or at / >, 1.00 (mol dm^{-3}), concentration / CO_2, no longer limiting factor ; 2 at / >, 1.00 (mol dm^{-3}), light <u>intensity</u> / temperature, is <u>limiting</u> factor ; 3 CO_2, needed / used, for Calvin cycle / for light independent stage or CO_2, reacts with / fixed by, RuBP ;	3
1(b)(ii)	little / no, photosynthesis ; (aerobic) respiration uses oxygen ;	2
1(b)(iii)	any three from: 1 to control a variable / to ensure a fair test / so CO_2 is the only variable ; 2 low, temperature / kinetic energy, decreases, rate / reaction / photosynthesis / O_2 production / O_2 increase ; 3 low, temperature / kinetic energy, decreases, (named) enzyme-substrate, collisions / complexes ; 4 <u>low(er)</u> temperature, is a limiting factor / may limit rate ; 5 high, temperature / kinetic energy, decreases, rate / reaction / photosynthesis / O_2 production / O_2 increase ; 6 high, temperature / kinetic energy, denatures (named) enzyme(s) ; 7 high / increased, temperature, causes / increases, photorespiration ;	3
