

5 The time of death of a person can be estimated in a number of ways.

(a) The time of death can be estimated using the length of insect larvae.

What is the name of the method that uses insect larvae to estimate the time of death?

(1)

- ☐ **A** dendrochronology
- ☐ **B** epigenetics
- ☐ **C** forensic entomology
- ☐ **D** species diversity

(b) The larvae of one species of blowfly can be used to estimate the time of death.

The graph shows the mean length of larvae from this species incubated at 10.62 °C.

(i) Calculate the mean growth rate of these larvae from 25 to 120 hours.

Include the units with your answer.

(2)

Answer.....

(ii) Comment on the suitability of using this data to estimate the time of death.

Use the information in the graph to support your answer.

(3)

[illegible]

(iii) Describe how the data shown in this graph could have been collected.

(3)

[illegible]

(c) The time of death can be estimated using the body temperature of the corpse.

Evaluate the use of the body temperature of a corpse to estimate the time of death.
