

10(a)	<i>any eight from</i> 1 capillary / glomerulus, <u>endothelium</u> ; 2 has, many / large, gaps / pores / holes / fenestrations ; 3 afferent <u>arteriole</u> wider than efferent <u>arteriole</u> ; 4 high, blood / hydrostatic, pressure in glomerulus ; 5 fluid forced, out of glomerulus / into Bowman's capsule ; 6 <u>podocytes</u> ; 7 have interdigitating, processes / extensions ; 8 that form, filtration slits / slit pores ; 9 <u>basement membrane</u> ; 10 (mesh of) collagen / glycoprotein (fibres) ; 11 acts as (main), selective barrier / filter ; 12 large / RMM > 68 000, proteins / molecules, do not pass through ; 13 (red / white blood) cells, do not pass through ; 14 water / solutes / ions, pass through ;	8
10(b)	<i>any seven from</i> 1 <i>two examples from:</i> liver / muscle / adipose ; 2 increases glucose uptake ; 3 increases permeability of cells to glucose ; 4 more, transport / GLUT (4), proteins (added to membrane) ; 5 by vesicles fusing with cell surface membrane ; 6 stimulates, glycogen synthesis / glycogenesis ; 7 glucokinase / hexokinase / glycogen synthase ; 8 lipid / triglyceride / fatty acid, synthesis stimulated ; 9 increase in respiration ; 10 (so) more (facilitated) <u>diffusion</u> of glucose into (liver) cells ; 11 decreases, glycogenolysis / lipolysis / gluconeogenesis ; 12 decreases <u>blood glucose concentration</u> ;	7
