

- 21** Which statement helps to explain why the two sugar-phosphate chains in a DNA molecule are a constant distance apart?
- A** Adenine and thymine are held together by the same number of hydrogen bonds as cytosine and guanine.
 - B** Each nucleotide molecule is the same size.
 - C** Each purine base is linked to a pyrimidine base.
 - D** The sugar-phosphate strands of the helix are held together by sulfur bridges.
