

Question	Marking Guidance	Mark	Comments												
02.1	1. Amylase;	4 (4 x AO1)	3. Reject dipeptide/ polypeptide bond												
	2. Glycosidic;														
	3. Peptide;														
	4. Amino acid(s);														
	<table border="1"> <thead> <tr> <th>Biological molecule</th><th>Enzyme</th><th>Name of bond hydrolysed</th><th>Product of digestion</th></tr> </thead> <tbody> <tr> <td></td><td>Amylase</td><td>Glycosidic</td><td></td></tr> <tr> <td></td><td></td><td>Peptide</td><td>Amino acid(s)</td></tr> </tbody> </table>	Biological molecule	Enzyme	Name of bond hydrolysed	Product of digestion		Amylase	Glycosidic				Peptide	Amino acid(s)		
Biological molecule	Enzyme	Name of bond hydrolysed	Product of digestion												
	Amylase	Glycosidic													
		Peptide	Amino acid(s)												

Question	Marking Guidance	Mark	Comments
02.2	1. Add biuret (solution);	2 (2 x AO1)	1. Reject burette or Beirut
	2. Purple (colour produced);		1. Reject heat 1. Accept a description of the biuret test: eg copper sulfate and sodium hydroxide or $\text{CuSO}_4 + \text{NaOH}$ or alkaline copper sulfate 2. Accept lilac/violet/mauve for purple

Question	Marking Guidance	Mark	Comments
02.3	1. (Positive because) enzymes are protein;	2 (2 x AO2)	Accept correct answer in any order
	2. (Because) enzymes not used up (in reactions) OR (Because) enzymes still present;		2. Accept enzymes reused for enzymes not used up 2. Presence of enzyme after reaction must be implied

Question	Marking Guidance	Mark	Comments
02.4	Correct answer of 1.30 = 2 marks;; Evidence of correct rearranged equation, for example Maximum rate of reaction = $k_{cat} \times$ Enzyme concentration = 1 mark OR Evidence of 1 or 1.298 or 1.29 or 1.3 (correct answer but incorrect significant figures) = 1 mark;	2 (2 x AO2)
