

- 19** A cell absorbs amino acids. This cell then synthesises and exports a digestive enzyme. Different cell structures are involved with different stages of this process.

Which row shows a possible sequence of cell structures that the amino acids pass through?

	cell surface membrane	Golgi body	rough endoplasmic reticulum	secretory vesicle
A	1st	2nd	3rd	4th
B	1st	3rd	4th	2nd
C	4th	2nd	1st	3rd
D	4th	1st	2nd	3rd
