

29 Which processes occur during the loading of sucrose into phloem sieve tubes?

- 1 Protons are pumped out of the cytoplasm of the companion cell into its cell wall.
- 2 There is a higher concentration of protons in the symplastic pathway outside the companion cell.
- 3 Protons are unable to move back into the companion cell.
- 4 A co-transporter molecule acts as a carrier for protons and sucrose.

A 1 and 2

B 1 and 4

C 2 and 3

D 3 and 4
