

- 37** Bacteria that infect skin wounds can become resistant to the antibiotic commonly used to kill them.

Which statement explains how these bacteria could become resistant to the antibiotic?

- A** Exposure to the antibiotic causes a change in the bacterial cell wall, preventing the antibiotic from working.
- B** Other bacteria that normally protect the skin against infection are killed by the antibiotic, allowing the infectious bacteria to survive.
- C** Random mutations in DNA allow some of the bacteria to survive in the presence of the antibiotic.
- D** The antibiotic causes the bacterial DNA to mutate, allowing the bacteria to survive in the presence of the antibiotic.
