

05.1	1. Amylase <u>hydrolyses</u> starch; 2. (To) maltose;	2	
-------------	--	---	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

05.2	1. (E) Amylase/enzyme is denatured; 2. (F) amylase is needed for/causes starch hydrolysis/breakdown/digestion OR (F) water (alone) does not (cause starch) hydrolysis/breakdown/digestion;	2	1. Accept a description of denaturation 2. Ignore 'it is a control'
-------------	--	---	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

05.3	1. Heat in Benedict's (solution); 2. Red/green/orange (precipitate/colour) (shows maltose/reducing sugar);	2	1. Reject description of non-reducing sugar test 2. Accept for 'heat', water bath
-------------	---	---	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

05.4	Correct answer for 2 marks = 7;; Accept for 1 mark, 7.2 (correct answer but not rounded) OR Evidence of $1.6 \div 4.0/0.4/40\%$ (correct dilution factor) OR Evidence of 0.08 (correct amylase volume in 0.2cm^3)	2	
-------------	---	---	--

Question	Marking Guidance	Mark	Comments
----------	------------------	------	----------

05.5	1. Reduces (human) error/uncertainty; 2. (It is) the resolution of a ruler; 3. (For a ruler measurement) the uncertainty is $\pm 1(\text{mm})$ OR	1 max	Ignore can only measure to whole numbers Ignore reliability and precision
-------------	---	-------	--

	(For a ruler measurement) the true value lies with $\pm 1(\text{mm})$;		Accept, the uncertainty of a ruler reading is $(\pm)0.5(\text{mm})$ OR readings of $<1\text{mm}$ are not accurate
