

16 The graph shows how the rate of a reaction changes with substrate concentration in the presence of:

- no inhibitor
- inhibitor X
- inhibitor Y.

One of the inhibitors is competitive and the other inhibitor is non-competitive.

What is the correct estimate of K_m for the reaction shown when a competitive inhibitor is present?

- A** 0.11 mol dm^{-3}
- B** 0.23 mol dm^{-3}
- C** 0.38 mol dm^{-3}
- D** 0.65 mol dm^{-3}
