

1(a)(i)	(sister) chromatids ; centromere ; histone ;	3
1(a)(ii)	prophase / metaphase ; I late / early A prometaphase	1
1(a)(iii)	I <i>ref. to</i> replication or cytokinesis <i>any two from:</i> provides energy ; movement of centrioles to poles ; spindle formation / organisation of microtubules (for spindle) ; movement of chromosomes to the, spindle equator / AW ; separation of, (daughter) chromosomes / (sister) chromatids, to opposite poles (of the cell) / during anaphase ; AW AVP ; e.g. (for) condensation / AW, of, chromatin / chromosomes	2
1(b)	<i>assume reference to binary fission unless stated otherwise</i> <i>any two from:</i> DNA replication ; A <i>idea</i> of, doubling / duplicating, DNA cell, elongation / gets longer ; A cell increases in size cell wall formation ; (includes) cytokinesis / described ; <i>max 1 if two ideas correct describing events that only occur in mitosis</i>	2
