phase of action potential	state of voltage-gated channels													
A	2													
C	1													
E	3													
F	3													
G	2													
9(b)	any three from: 1 Schwann cells, wrap around the axon / form the myelin sheath ; 2 insulates (axon) / prevents movement of ions ; 3 depolarisation / action potentials, can only occur at nodes (of Ranvier) ; 4 ref. to long(er) local circuits / (nodes are) 1–3 mm apart ; 5 action potentials, move by saltatory conduction / jump from node to node ; 6 speed of transmission is, fast(er) / 100 m s⁻¹ ;	3
