

Question number	Answer	Additional guidance	Mark
1(a)(i)	A diagram that makes reference to the following points: - one glycerol (squarish / labelled), two fatty acids (rectangular / labelled), one phosphate and three bonds shown (1) - all components drawn together correctly (1)	 ecf if: {one / three} fatty acids drawn attached to glycerol but rest correct glycerol missing but two fatty acids attached to head with bonds bonds missing but all four components are touching correctly	(2)

Question number	Answer	Mark
1(a)(ii)	The only correct answer is A (ester) <i>B is incorrect because glycosidic bonds are found in carbohydrates</i> <i>C is incorrect because there are no hydrogen bonds in phospholipids</i> <i>D is incorrect because peptide bonds are found in proteins</i>	(1)

Question number	Answer	Mark
1(b)(i)	The only correct answer is B (by diffusion) <i>A is incorrect because active transport moves polar molecules</i> <i>C is incorrect because nonpolar molecules can diffuse through the nonpolar fatty acids</i> <i>D is incorrect because only water moves by osmosis</i>	(1)

Question number	Answer	Mark
1(b)(ii)	The only correct answer is B (one) <i>A is incorrect because the second statement is the only correct one</i> <i>C is incorrect because the second statement is the only correct one</i> <i>D is incorrect because the second statement is the only correct one</i>	(1)
