

Question Number	Answer	Additional guidance	Mark
1(a)	(group of) tissues which work together to perform {a function / functions}	REJECT same tissues IGNORE join together	(1)

Question Number	Answer	Mark
1(b)(i)	The only correct answer is B endoplasmic reticulum <i>A is not correct because X is the endoplasmic reticulum</i> <i>C is not correct because X is the endoplasmic reticulum</i> <i>D is not correct because X is the endoplasmic reticulum</i>	(1)

Question Number	Answer	Additional guidance	Mark
1(b)(ii)	nucleus which {contains the genetic material / DNA replication / transcription}	mark first function ACCEPT production of RNA / RNA nucleotides ACCEPT controls the activities of the cell IGNORE nuclear envelope IGNORE controls the cell unqualified IGNORE controls cell function IGNORE protein synthesis	(1)

Question Number	Answer	Mark
1(b)(iii)	The only correct answer is B 1 and 3 only <i>A is not correct because the nucleolus does not synthesise DNA</i> <i>C is not correct because the nucleolus does not synthesise DNA</i> <i>D is not correct because the nucleolus does not synthesise DNA</i>	(1)

Question Number	Answer	Additional guidance	Mark
1(b)(iv)	eukarya / eukaryote / eukaryotic / eukaryota	REJECT incorrect answers	(1)

Question Number	Answer	Mark
1(c)(i)	The only correct answer is A amyloplast <i>B is not correct because chloroplasts are not found in tuber cells below the surface of the soil</i> <i>C is not correct because starch is stored in amyloplasts</i> <i>D is not correct because starch is stored in amyloplasts</i>	(1)

Question Number	Answer	Additional guidance	Mark
1(c)(ii)	An explanation that makes reference to the following points: • polymer of glucose (1) • compact molecule so lots of {glucose / starch / energy} can be stored (1)	ACCEPT can be hydrolysed to glucose ACCEPT glucose joined by glycosidic bonds ACCEPT takes up little space so {more / lots} can be stored IGNORE branching IGNORE osmotic effect	(2)
