

4 Centrioles, cilia, microtubules and microvilli are structures found in eukaryotic cells.

Which statement about these cellular structures is correct?

- A** Centrioles, cilia and microvilli are composed of microtubules.
- B** Centrioles play a role in mitosis and semi-conservative DNA replication.
- C** Cilia and microvilli both increase the cell surface area for absorption.
- D** Microtubules are made of protein and form the spindle in mitosis.
