

**32** Athletes often move from low altitude to high altitude to train for a race.

Which statements about the effect of training at high altitude are correct?

- 1 Higher concentrations of carbon dioxide stimulate greater oxygen dissociation.
- 2 Lower concentrations of oxygen stimulate the uptake of more oxygen by red blood cells.
- 3 Lower partial pressures of oxygen stimulate higher production of red blood cells.

**A** 1 and 2 only    **B** 2 and 3 only    **C** 1 only    **D** 3 only
