

number			
6(a)(i)	9 : 1	ACCEPT 6 : 1 / 5 : 1	(1)

Question number	Answer	Additional guidance	Mark
6(a)(ii)	A description that includes the following points: - will not have any effect on the total membrane phospholipids (1) - the inner layer will have a relatively higher content of the other phospholipids / the outer layer will have a relatively lower content of the other phospholipids (1)	ACCEPT increase phospholipid content in outer layer and decrease content in inner layer	(2)

Question number	Answer	Additional guidance	Mark
6(a)(iii)	A description that includes the following points: - will alter membrane {properties / permeability / fluidity} (1) - so that platelets will release thromboplastin (1) - thromboplastin is {an enzyme / a catalyst} (1) - that converts prothrombin into thrombin (1)	NB thromboplastin catalyses prothrombin into thrombin = 2 marks	(4)

number			
6(b)	An explanation that includes the following points: - thrombin is an <u>enzyme</u> (1) - because the inhibitor will change the shape of the active site (of thrombin) (1) - therefore thrombin cannot bind to fibrinogen (1) - therefore {less / no} fibrinogen will be converted into fibrin (1) - therefore there is {less / no} {mesh / fibrin / fibres} to trap {blood cells / platelets} (1)	ACCEPT inhibitor blocks the active site / fewer active sites available ACCEPT {less / no} thrombin to bind to fibrinogen / fewer collisions / fewer enzyme substrate complexes formed ACCEPT slower conversion	(4)
