

5(a)	<i>in context of from a plant</i> loss of <u>water vapour</u> ; ↓ evaporation unqualified from, the aerial parts / leaves ;	2
5(b)	1.2 (mm min ⁻¹) ;	1
5(c)	<i>any two from:</i> humid air / water vapour, moves away from the leaves ; water potential gradient is steeper ; higher rate of evaporation into the air spaces in the leaf ;	2

Question	Answer	Marks
5(d)	<i>any four from:</i> movement by, cohesion-tension ; cohesion / hydrogen bonds, between water <u>molecules</u> ; A cohesive force (water moves as an) unbroken column / AW ; transpiration pull or column of water, under tension / pulled up ; <i>ref. to</i> adhesion of water molecules to, cellulose / lining / walls (of xylem vessels) ; A adhesive force <i>ref. to</i> hydrophilic / polar, property of cellulose (fibres) ; A hydrophilic / polar, parts of lignin <i>ref. to</i> water potential ; e.g. (evaporation results in) lower water potential at the top of the xylem vessel (water moves) down a water potential gradient / from a region of high water potential to a region of lower water potential	4
