

- 13** In an investigation, the same concentration of the enzyme phosphorylase was added to different concentrations of glucose phosphate and incubated at 30 °C. At 1 minute intervals, one drop of the reaction mixture was removed and added to a drop of iodine solution on a white tile.

The diagram shows the results of this investigation.

What explains the trend in the results of this investigation?

- A** Phosphorylase catalyses a reaction converting glucose phosphate to starch.
- B** The maximum rate of reaction is reached at 20 mg dm⁻³ of glucose phosphate.
- C** Substrate concentration is limiting at concentrations of glucose phosphate 25 mg dm⁻³ or less.
- D** Enzyme concentration is limiting at concentrations of glucose phosphate 25 mg dm⁻³ or less.
