

26 What is a definition of transpiration?

- A** the evaporation of water vapour from a leaf due to the diffusion of water from an area of low water potential to high water potential
- B** the loss of water vapour from a plant to its environment by diffusion down a water potential gradient
- C** the movement of water from root to leaf due to the adhesion of water molecules to one another
- D** the uptake of water by plant roots by movement of water down a continuous water potential gradient from air to soil
