

- 1** A student used a light microscope to observe a blood smear on a microscope slide.

An eyepiece graticule was used to measure the diameter of a white blood cell on the slide. The student recorded that the white blood cell was 5 eyepiece graticule units in diameter.

Which additional information does the student need to determine the diameter of the white blood cell in micrometres?

- A** calibration of the eyepiece graticule using a stage micrometer only
- B** calibration of the eyepiece graticule using a stage micrometer and the magnification of the eyepiece lens
- C** the magnification of the eyepiece lens only
- D** the magnification of the eyepiece lens and the magnification of the objective lens
