

13 A student wrote four statements about water.

- 1 Water has a high specific heat capacity which maintains the temperature of water within cells.
- 2 Mammals rely on water having a relatively low latent heat of vapourisation to keep them cool.
- 3 When a negatively charged ion is added to water, the δ^+ charge on the hydrogen atom is attracted to the ion.
- 4 When surrounded by water, non-polar molecules tend to be pushed apart from one another.

Which statements are correct?

	1	2	3	4
A	✓	x	✓	✓
B	✓	x	✓	x
C	x	✓	x	✓
D	x	✓	x	x

key

✓ = correct

x = not correct
