

28 Cellulose, lignin and suberin are components of various plant cell walls.

Descriptions of these cell wall components are listed.

- 1 a component of the Casparian strip
- 2 redirects water into the symplast pathway
- 3 a hydrophobic component of cell walls
- 4 water interacts with this molecule in the apoplast pathway

Which row correctly matches three of the descriptions with cell wall components?

	cellulose	lignin	suberin
A	2	4	1
B	3	4	2
C	4	1	2
D	4	3	1
