

Question	Marking guidance	Mark	Comments
05.1	1. First oxygen binds (to Hb) causing change in shape; 2. (Shape change of Hb) allows more O ₂ to bind (easily) / greater saturation with O ₂ OR Cooperative binding;	2	
05.2	1. (HbA has) lower affinity for O ₂ at low partial pressures; OR (HbA has) lower affinity for oxygen at pp found in tissues; 2. Easier unloading of O ₂ for (aerobic) respiration;	2	
05.3	1. A large/significant increase in HbF; 2. (HbF has) higher affinity for O ₂ (than faulty HbA); 3. Higher proportion of HbF in blood so more oxygen carried; OR More oxygen carried after treatment;	3
