

- 34** Which statement correctly describes an event in the cardiac cycle that occurs immediately after atrial systole?
- A** A wave of excitation passes through the sinoatrial node (SAN), before spreading down to the base of the septum.
 - B** Electrical impulses pass from the muscles of the atria to the muscles of the ventricles to cause ventricular systole.
 - C** Electrical impulses pass through conducting fibres, which cause a delay before spreading to Purkyne tissue.
 - D** The semilunar valves close to prevent the backflow of blood.
