

6(a)	any three from: covalent bonds between collagen molecules (between R groups / side-chains) ; covalent bonds are strong ; (molecules) staggered / overlapping molecules, so no weak areas (gives greater strength) ; (in skin) fibres line up in layers, not parallel / running in different directions ; provides tensile strength / strength in different directions ;	3
6(b)	any two from: at pH 8.0: ionic / hydrogen bonds, (between R groups) broken / altered ; active site shape altered ; (active site) no longer / less, complementary to substrate / collagen or fewer enzyme–substrate complexes formed ; AVP ; e.g. the amino acids in the active site affected by the changing pH ref. to partial denaturation	2
