

7(a)	RNA polymerase attached to promoter ; repressor detached from operator ;	2
7(b)(i)	structural (gene) ;	1
7(b)(ii)	lactose permease ; A beta-galactoside permease movement / transport, of lactose into cell or makes (cell surface) membrane (more) permeable to lactose ;	2
7(c)	1 population increases, then levels off, increases, then levels off / AW ; <i>any three from:</i> 2 (first increase) glucose, metabolised / respiration ; 3 (first levelling off) glucose has run out ; 4 (first levelling off) lactose, hydrolysed / broken down, into, glucose / galactose ; 5 (second increase) glucose / galactose, metabolised / respired ; 6 (second levelling off) lactose / glucose / galactose, has run out ; 7 AVP ; e.g. <i>idea of</i> time delay (for, lactose permease / beta galactosidase, to work)	4
