

- 5 An amino acid enters a cell and is then used to synthesise an enzyme secreted by the cell.

What is the sequence of cell structures involved in the synthesis of the enzyme?

	first  last			
A	rough endoplasmic reticulum	Golgi body	ribosome	exocytotic vesicle
B	rough endoplasmic reticulum	ribosome	Golgi body	cell surface membrane
C	ribosome	rough endoplasmic reticulum	Golgi body	exocytotic vesicle
D	ribosome	Golgi body	rough endoplasmic reticulum	cell surface membrane
