

19 Which description of chromosome structure is correct?

- A** A chromosome at the beginning of interphase consists of two identical chromatids, each containing one linear molecule of DNA.
- B** Telomeres are lengths of non-coding DNA found at one end of each chromatid to prevent loss of genes during cell division.
- C** The two identical chromatids of a chromosome are held together by a centromere in which there is no DNA.
- D** The very long DNA molecule of each chromatid is coiled and held together by proteins called histones.
