

35 In chronic obstructive pulmonary disease (COPD), airflow through the airways is reduced.

Which statements explain the reduced airflow?

- 1 More mucus is secreted into the airways.
- 2 Airways and alveoli lose their elasticity.
- 3 Many of the alveoli are destroyed.
- 4 Carbon monoxide binds irreversibly to haemoglobin.

- A** 1, 2, 3 and 4
- B** 1, 2 and 3 only
- C** 1, 3 and 4 only
- D** 2, 3 and 4 only
