

5 Succession can result in the formation of different types of habitat.

(a) State the meaning of the term **succession**.

(1)

(b) Which of the following describes a habitat?

(1)

- ☐ **A** a group of interacting organisms
- ☐ **B** a place that meets the environmental conditions an organism needs to survive
- ☐ **C** the number of one species found in a particular place
- ☐ **D** the niche of an organism

*(c) Succession takes place as a glacier retreats. As the ice melts, bare rock is exposed.

The graph shows the changes in the numbers of three different types of plant, alder, spruce and hemlock, with time after a glacier has retreated.

Explain the changes in the numbers of the three types of plant with time after the glacier has retreated.

Use the information in the question and your own knowledge to support your answer.
