

- 1** Which statement explains why it is necessary to use an electron microscope to see the cristae of a mitochondrion?
- A** The magnification of the electron microscope is greater than that of the light microscope.
 - B** The membranes of the cristae are separated by a distance greater than 200 nm.
 - C** The resolution of a student microscope using daylight is too low.
 - D** The wavelength of an electron beam is longer than the wavelength of light.
