

2(a)	5000 / 5 × 10 ³ (: 1) ;	1	
2(b)(i)	<i>one from:</i> length of transect ; number of sites surveyed / number of transects (each year) ; geographical area / reef, in which study carried out ; direction of, sampling / swimming / transect ;	1	
2(b)(ii)	<i>three from:</i> <i>supports</i> (mean log) lionfish abundance has decreased (after 2008) ; <i>does not support</i> increase in mean abundance decreasing from 2007–2008 so could have started catching lionfish, earlier / in 2007 ; 95% confidence interval bars overlap ; therefore no significant difference between means ;	3	
2(c)	70 ; ; ; from graph: 95% confidence interval = 35 ; therefore, $S_M = 35 / 2 = 17.5$ $\sqrt{n} = 4$; rearranging equation: $(17.5 \times 4) 70 = s$;	3	<i>note: correct answer with no working = 3 marks if incorrect answer, then check working</i>
