

Question	Marking Guidance	Mark	Comments
01.1	1. Buffers changes in temperature; 2. (Provides a) cooling effect (via evaporation);	2 (2 x AO1)	1. Accept descriptions of buffering changes in temperature, eg resists temperature changes

Question	Marking Guidance	Mark	Comments
01.2	1. Evaporation/transpiration (from the porous pot); 2. Tension created moves water (upwards); 3. Cohesion maintains the column of water OR Cohesion is due to hydrogen bonds between water (molecules);	3 (1 x AO2, 2 x AO3)	2. Accept 'negative pressure' for tension or 'water pulled' or 'suction'. Ignore adhesion but reject mark point 3 if adhesion used to describe attraction between water molecules.

Question	Marking Guidance	Mark	Comments
01.3	0.8/0.85/0.848/0.8478 (using 3.14); OR 0.8482 (using π on calculator)	1 (1 x AO2)
