

4(a)(i)	plasmodesmata ;	1
4(a)(ii)	<i>any two from:</i> <i>ref. to connecting two cells ; in context of connecting cytoplasm</i> (facilitate) movement of substances between cells ; A named substances <i>ref. to symplast pathway ;</i> cell to cell communication / passage of cell signalling molecules ; AVP ; e.g. removes the need to cross the partially permeable cell surface membrane (when moving between cells) increases the rate of movement of substances between cells	2
4(b)(i)	protein coat / capsid ; DNA or RNA / nucleic acid ; A genetic material <i>ref. to some viruses have envelope ;</i>	2
4(b)(ii)	<i>allow sucrose for assimilates throughout</i> <i>any five from:</i> viruses / assimilates, enter via plasmodesmata ; movement / diffusion, of assimilates into (phloem) sieve tubes, lowers water potential / AW ; (so) water enters, by osmosis / down water potential gradient / AW ; hydrostatic pressure increases (at source) ; A turgor pressure <i>for hydrostatic pressure</i> unloading at, sink / named sink, lowers hydrostatic pressure (at sink) ; detail ; e.g. assimilates move out and water follows osmotically pressure gradient created / higher pressure in source (than sink) / lower pressure in sink (than source) ; (so) mass flow; <i>term to be used in context</i> from source to sink ; <i>allow mp if terms source and sink used in correct context within complete response</i> AVP ; (viruses and assimilates travel) through sieve pores	5
