

3 Haemophilia A is an inherited genetic disorder.

Haemophilia A results in the blood not being able to clot.

(a) The table gives some information about blood clotting components.

Complete the table by filling in the empty boxes with either the name of the component, the role of the component or the solubility of the component.

(6)

Name	Role	Solubility
thromboplastin		soluble
.....	catalyses the conversion of fibrinogen into fibrin	
fibrin	1 2	

(b) Haemophilia A is inherited in a similar way to red-green colour blindness.

Explain why more males than females are affected with haemophilia A.

(3)
