

7(a)	<i>dominant</i> – allele always has effect on phenotype / allele expressed in homozygote and heterozygote / allele always expressed ; <i>recessive</i> – allele only has effect on phenotype if dominant allele absent / only expressed in homozygote ;	2
7(b)	<i>symbols</i> Z^B = allele for bronze feathers Z^b = allele for brown feathers ; <i>parents phenotypes</i> <i>bronze male</i> <i>brown female</i> <i>parents genotypes</i> $Z^B Z^b$ x $Z^b W$; <i>gametes</i> Z^B Z^b Z^b W ; <i>offspring genotypes</i> $Z^B Z^b$ $Z^B W$ $Z^b Z^b$ $Z^b W$; <i>offspring phenotypes</i> bronze male bronze female brown male brown female; <i>ecf for putting allele on W</i> <i>ecf for incorrect symbols with no superscript</i> <i>ecf for different letters for alleles</i> <i>no sex chromosomes = no marks</i>	5
7(c)	1 cross with brown female ; 2 if all offspring bronze then male is, homozygous / $Z^B Z^B$; 3 if (some offspring are bronze and) some are brown then male is, heterozygous / $Z^B Z^b$;	3
