

13 A student listed some possible steps to measure the progress of a starch–amylase catalysed reaction.

- 1 Calibrate the colorimeter with a dilute iodine solution.
- 2 Measure the light transmission with a colour filter.
- 3 Measure the absorbance of the reaction at different wavelengths of light.

Which steps are required in their method?

- A** 1, 2 and 3 **B** 1 and 2 only **C** 2 and 3 only **D** 3 only
